It's Tuesday, 3:30 a.m. You can't sleep.

IS YOUR GUARD GUARDING?

If you had the Sentry SERGEANT and TOURKEY working for you, you'd promptly go back to sleep. But with the watchman's clock you won't know until you check the chart in the morning.

Sentry's patented electronic guard "supervisors" are the first true innovation in the field in many years. The SERGEANT lets you know within minutes, or even seconds, if your guards at remote locations are not on the job as scheduled. Signals are sent over regular telephone lines to the SENTRY 9999 Central Receiver, monitored in your dispatch center.

The electronic TOURKEY requires the watchman to visit wall stations in the proper sequence, and on schedule.

Otherwise, the SENTRY 9999 will print out an exception signal. Installation is simple and fast, since most wall stations require no wiring or batteries.

One SENTRY 9999 can monitor thousands of protected locations. No leased phone lines are required. Alarms can also be monitored, so that you can plan a complete security system with Sentry for all your protection needs.

And next time, sleep like a baby.

Write or phone us today.
